

Determination of an acceptable height to install Allura Fiber Cement Siding

The height at which Allura Fiber Cement Siding can be installed is not limited. Rather, the appropriate application of Allura Fiber Cement Siding, or any cladding product at a specific height is determined by the following factors:

- National, State and Local building codes as adopted by the local jurisdiction.
- Design windload for the cladding specific to the project and location.
- Construction assemblies and systems for the specific project.
- Allowable windload capacity of the siding product chosen for the project.

To ensure the appropriate application of Allura Fiber Cement Siding at any given height, in compliance with the above outlined factors for your project, Allura recommends that you consult with your local code official or governing body and follow the requirements listed in ICC-ES Evaluation Report ESR-1668, CCMC Evaluation Report 12987-R and other jurisdictional approvals found on the Allura Fiber Cement Siding Technical Information page of the Allura website.

In addition, compliance with the requirements listed in the **Allura Fiber Cement Siding Installation Manual** must be met.

Questions regarding the utilization of the above information should be directed to: Allura Fiber Cement Siding Information (844) 4 ALLURA or (844) 425-5872.

For more information on Allura Fiber Cement Siding application please refer to the [Allura Fiber Cement Siding Installation Manual](#).
